Safety stickers .....	86

## **KETO-51 LD**

---

## **SAFETY INSTRUCTIONS**

Read this manual before taking the harvester into use.

Working with a harvester involves great safety risks. These instructions involve main points to understand and avoid safety risks.

The high pressure hydraulics produce great forces, which transfer large masses. They can cause dangerous situations to the operator and other persons, machines and other objects nearby.

### **THE SAW IS DANGEROUS**

The saw is made efficient so that trees can safely be felled. The saw chain has a speed of 35 m/s. By freerunning the speed is even much higher. **SPLINTERS FROM A SNAPPING CHAIN HAVE THE SAME KINETIC ENERGY AS A PISTOL BULLET.** Splinters have caused injuries at distance of even 100 meters from the machine.

#### **Varoitus**

*NEVER USE THE SAW SO THAT THE SAWBAR IS DIRECTED TOWARDS THE CAB OR OTHER PERSONS.*

#### **Varoitus**

*BESIDES THE DANGER OF SPLINTERS AN UNBROKEN RUNNING SAW IS ALSO DANGEROUS.*

#### **Varoitus**

*NEVER TAKE SUCH A POSITION THAT YOU MIGHT GET HIT BY THE SAW.*

### **DURING MAINTENANCE AND ADJUSTMENT, WATCH OUT FOR MOVING PARTS ON THE HARVESTER.**

Never go to such a place, where you might get caught between the tracks or the delimiting knives. Always keep in mind that although the engine and the hydraulic pump have stopped, the action of the hydraulic valves can release the hydraulic pressure and cause movements. Always switch off the engine before you approach the harvester.

Empty the accumulator before service. Do not open joints that are pressurized.

If you have to carry out service or adjustments with the engine in operation, remove the chain and the sawbar before servicing.

**SAFETY PRECAUTIONS WHILE WORKING.**

BEFORE SERVICE AND MAINTENANCE READ FIRST THE OPERATION- AND SERVICE BOOK.

**DANGER ZONE**

- The danger range of a harvester in operation is twice the length of the tree to be felled in every direction. Persons are not safe until 70 meters from the harvester.

**THE TREE MIGHT FALL IN THE WRONG DIRECTION**

- The operator and the spectators always have to be prepared for the tree falling in another direction than intended. There are many reasons why the tree falls in a wrong direction, for instance.
- The operator makes a missjudgment of the weight of the tree, the wind direction or force, the length of the tree or the natural inclination of the tree.
- The operator weighs the loader wrongly or pushes wrong buttons by mistake.
- If the sawing fails, and normal felling of the tree has to be interrupted, the wind can fell the tree later on.
- If a failure appears on the harvester preventing the intended motion. For instance a hydraulic hose brakes, the harvester can get some electrical- or valve failure, causing the harvester not to obey given order.
- A sudden shift of wind changes the direction of the tree.
- If the snow only falls on one side of the tree, the centre of gravity is suddenly changed.
- The tree changes direction, when hitting another tree.

**VEHICLE STABILITY**

- Ensure that the vehicle is on a sufficiently solid ground. Also consider the inclination of the machine.

**SHUT DOWN THE MACHINE WHEN A FAILURE OCCURS**

- Never start repair before the machine has been shut down.

**NOTE THE TYPE OF THE BASE MACHINE**

- If the base machine is an excavator or a tractor check the safety of the cabin.
- The glasses of the cabin and other construction may not hold suddenly stresses as good as in a base machine which has been built as a forest machine.

**LOCK OUT FOR HIDDEN FORCES**

- Take into consideration the forces of for instance a tree strained behind another one. When felling the tree, the top will be released from behind the another tree, and the tree can suddenly turn.

## **NOTE THE DISTANCE FROM HIGH TENSION LINES**

- Do not go too near the high tension lines.
- The high tension lines hight from the ground:

<b>Voltage</b>	<b>Height</b>
380/220 V	about 4,5m
6-45 V	about 5 m
110 KV /or more	about 6m

Notice that snow and ice can load high tension lines, so that they can be even lower than these hights.

## **HANDLING LIQUIDS**

- Follow the manufactures instructions.

Liquids which are used in a harvester:

- Oil
- Hydraulic liquid
- Urea liquid (Optional)
- Colour marking liquid (Optional)

## **0.1 SAFETY STICKERS**

The owner and/or the employer has a duty to see that the stickers below are always attached to the machine. You can order new stickers as a spare part. Below are the explanation of the stickers.

The stickers are placed inside the cover of the hydraulblock because of weak wearability.

Figure 1

Use protective gloves during maintenance of the sawbar.

Figure 2

Warning of pressure in the pressure accumulator.

Figure 3 & 4

Avoid the hot surface and read the service instructions before maintenance. Risk of fingers getting crushed during maintenance.

Figure 5

Risk of falling load. Keep away from the machine.

## **1. Preface**

The following signs/names are used in this publication:

Compl.=Complete

NS=Not saw side

SS=Saw side

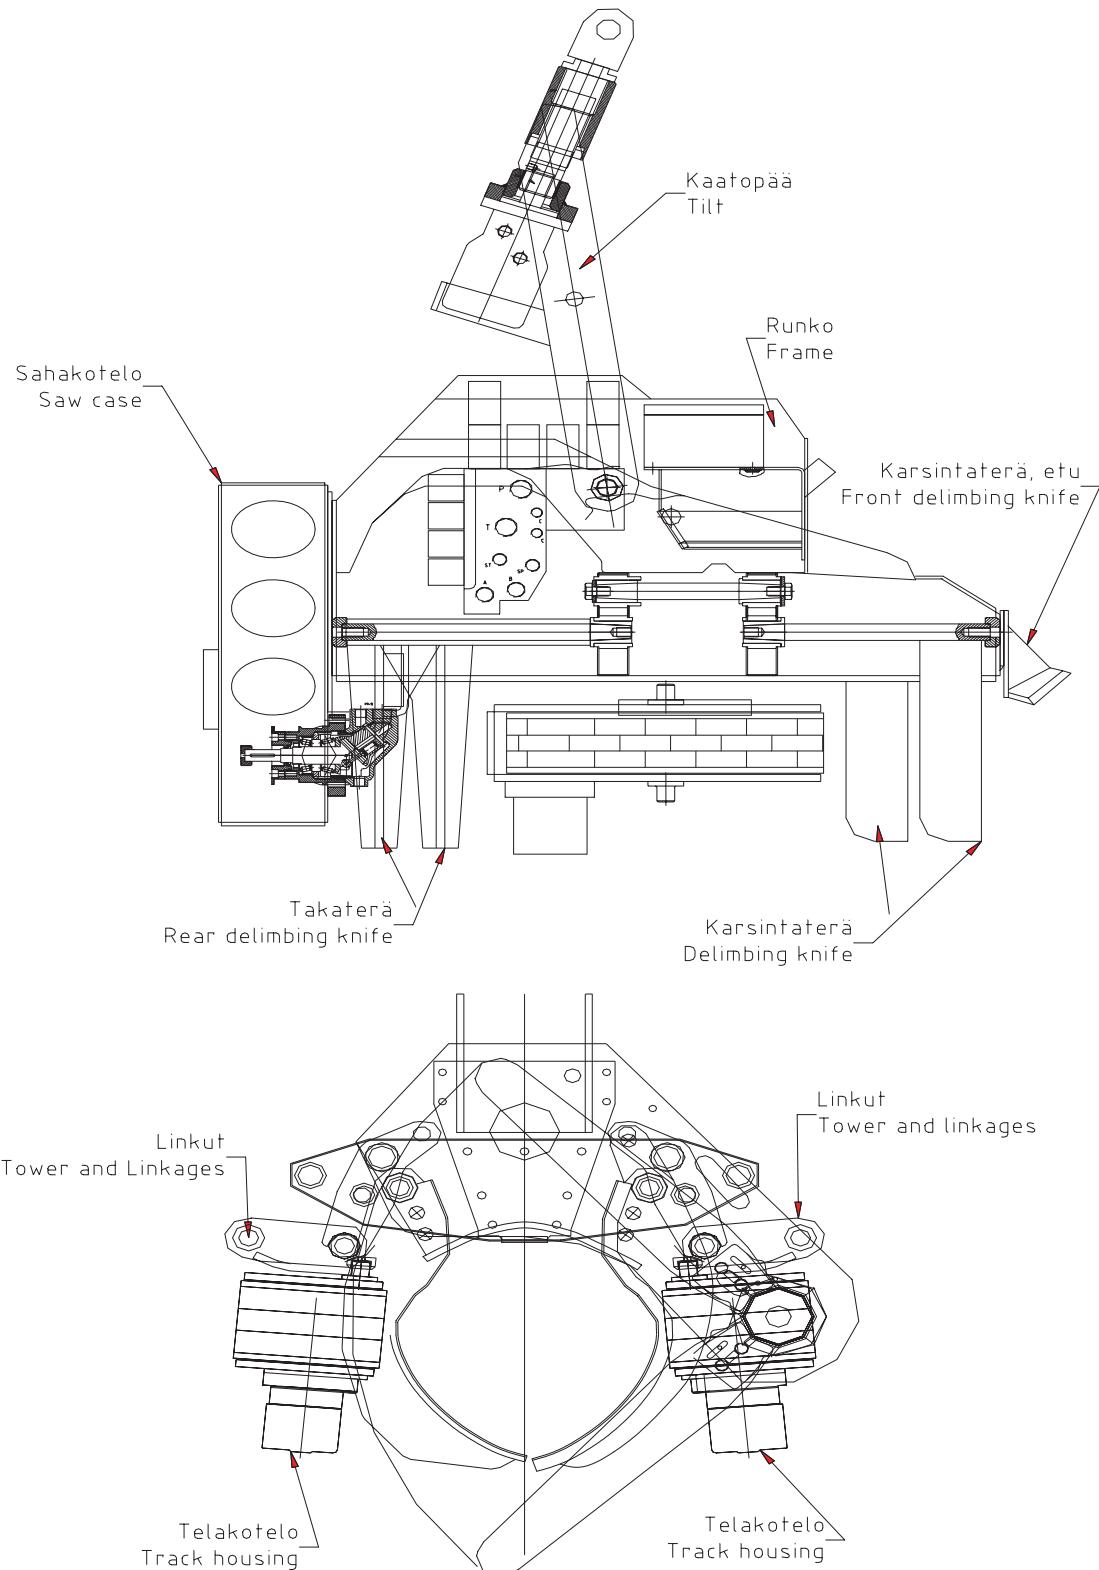

/K="Keto" hydraulic motor

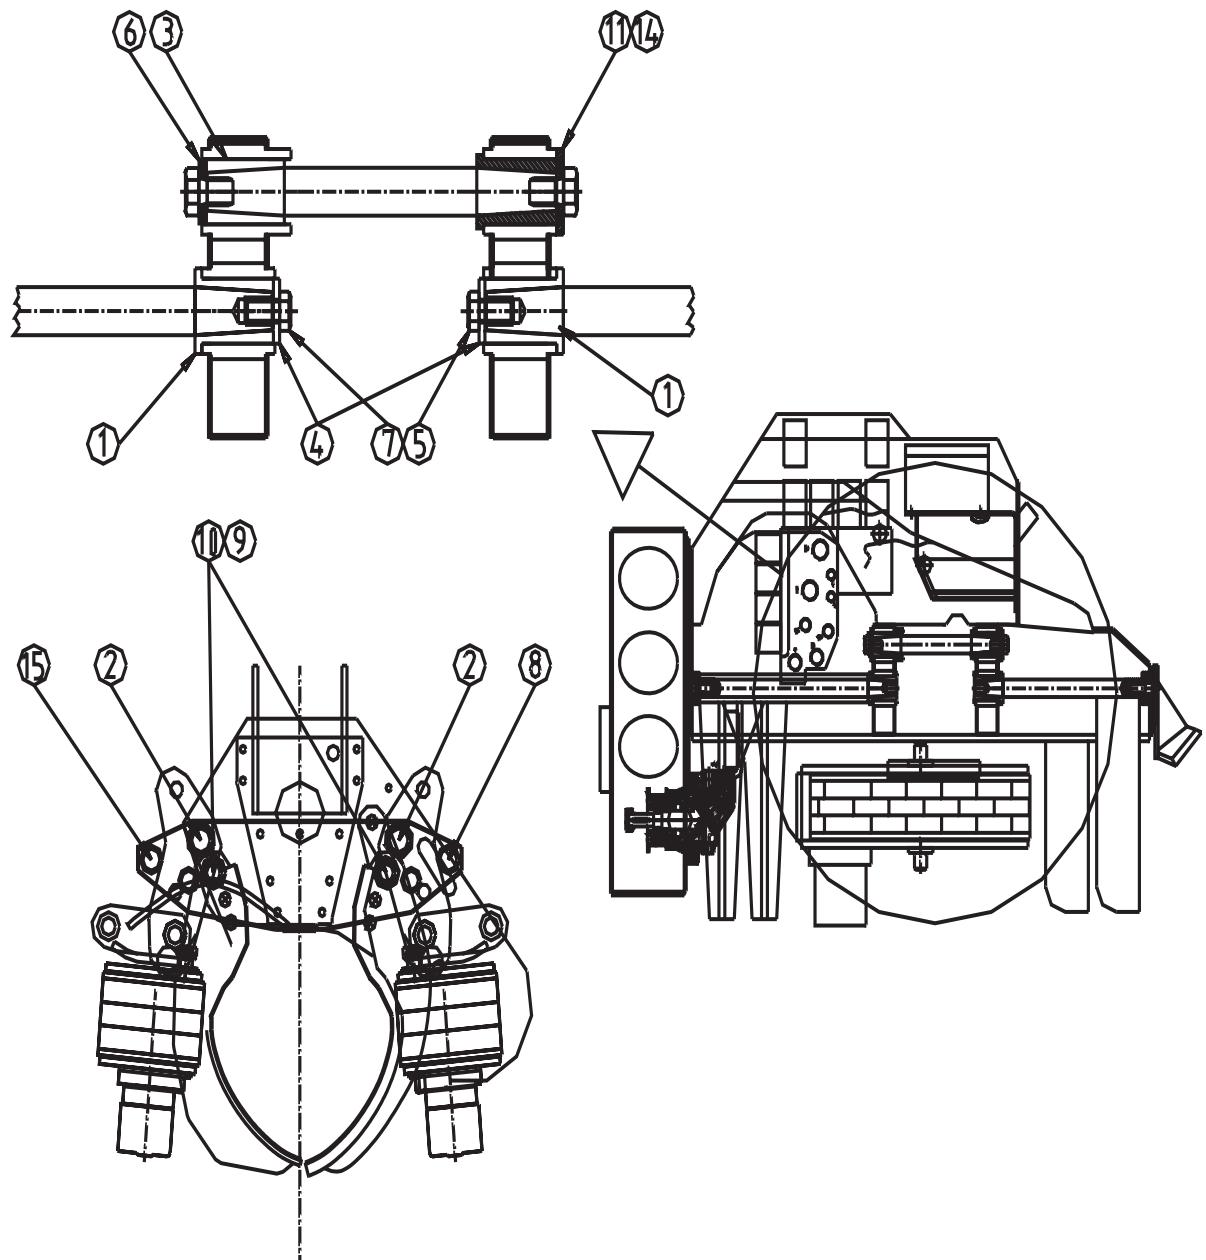

/R=Standard hydraulic motor

## Safety stickers

POS NUMBER	QTY	ITEM	NOTE
1.	8-9900-1	1	Block cover
2.	8-9900-20	1	Saw casing
3.	8-9900-30	1	Tilt
4.	8-9900-40	1	Pressure accumulator

### Note

*Safety sticker location is on the inside of block cover.*

Figure 1

Use protective gloves during maintenance of the sawbar.

Figure 2

Warning of pressure in the pressure accumulator.

**Figure 3 and 4**

Avoid touching the hot surface and read the service instructions before maintenance. Risk of fingers getting crushed during maintenance.

**Figure 5**

Risk of falling load. Keep away from the machine.
